Control Statement-Assignment

1. ATM Withdrawal

```java
package Task.com;

    import java.util.Scanner;

    public class ATM {
        void withdraw() {
            Scanner sc = new Scanner(System.in);

            int correctPIN = 1234;
            double balance = 5000;

            System.out.print("Enter PIN: ");
            int pin = sc.nextInt();

            if (pin == correctPIN) {
                System.out.print("Enter withdrawal amount: ");
                double amount = sc.nextDouble();

                if (amount <= 0) {
                    System.out.println("Invalid Amount");
                } else if (amount <= balance) {
                    balance = balance - amount;
                    System.out.println("Withdrawal Successful");
                    System.out.println("Remaining Balance: " + balance);
                } else {
                    System.out.println("Insufficient Balance");
                }
            } else {
                System.out.println("Incorrect PIN");
            }
        }

        public static void main(String[] args) {
            ATM obj = new ATM();
            obj.withdraw();
        }
    }
```

Console
Install Java 27 Support
<terminated> ATM [Java Application] C:\Users\Suba\.p2\pool\plugins\org.eclipse.justj.openjdk.hotspot.jre.full.win32.x86_64_25.0
Enter PIN: 1234567
Incorrect PIN

2. Electricity Bill Calculation

```java
package Task.com;
import java.util.Scanner;

public class ElectricityBill {
    void calculateBill() {
        Scanner sc = new Scanner(System.in);

        System.out.print("Enter units consumed: ");
        int units = sc.nextInt();

        double bill;

        if (units < 0) {
            System.out.println("Invalid Units");
        } else if (units <= 100) {
            bill = units * 2;
            System.out.println("Electricity Bill: Rs." + bill);
        } else if (units <= 200) {
            bill = (100 * 2) + (units - 100) * 3;
            System.out.println("Electricity Bill: Rs." + bill);
        } else {
            bill = (100 * 2) + (100 * 3)
                    + (units - 200) * 5;
            System.out.println("Electricity Bill: Rs." + bill);
        }
    }

    public static void main(String[] args) {
        ElectricityBill obj = new ElectricityBill();
        obj.calculateBill();
    }
}
```

```
Console  Install Java 27 Support
<terminated> ElectricityBill (1) [Java Application] C:\Users\Suba\.p2\pool\plugins\org.eclipse.justj.openjdk.hotspot.jre.full.win32.x86_64_25.
Enter units consumed: 208
Electricity Bill: Rs.540.0
```

3. Student Grade System

```java
package Task.com;
import java.util.Scanner;

public class StudentGrade {
    void checkGrade() {
        Scanner sc = new Scanner(System.in);

        System.out.print("Enter marks: ");
        int marks = sc.nextInt();

        if (marks < 0 || marks > 100) {
            System.out.println("Invalid Marks");
        } else if (marks >= 90) {
            System.out.println("Grade A");
        } else if (marks >= 75) {
            System.out.println("Grade B");
        } else if (marks >= 50) {
            System.out.println("Grade C");
        } else {
            System.out.println("Fail");
        }
    }

    public static void main(String[] args) {
        StudentGrade obj = new StudentGrade();
        obj.checkGrade();
    }
}
```

Console | Install Java 27 Support

<terminated> StudentGrade [Java Application] C:\Users\Suba\.p2\pool\plugins\org.eclipse.justj.openjdk.hot

```
Enter marks: 90
Grade A
```

4. Login Attempt System

```java
package Task.com;
    import java.util.Scanner;

    public class LoginSystem {
        void login() {
            Scanner sc = new Scanner(System.in);

            String correctPassword = "java123";
            int attempts = 0;
            boolean success = false;

            while (attempts < 3) {
                System.out.print("Enter password: ");
                String password = sc.nextLine();

                attempts++;

                if (password.equals(correctPassword)) {
                    System.out.println("Login Successful");
                    success = true;
                    break;
                } else {
                    System.out.println("Invalid Password");
                }
            }

            if (!success) {
                System.out.println("Maximum attempts reached");
            }
        }

        public static void main(String[] args) {
            LoginSystem obj = new LoginSystem();
            obj.login();
```

```
